

About

This was a project me and my friends worked on for the university in the second year, below the documentation based on university requirements.

This project was about online University Library Management, and its requirement was:

1. Signing up a new user (e.g. admin, student)
2. Login as admin and as student
3. Updating a user details
4. Adding a book (by admin)
5. Updating a book details (by admin)
6. Browsing books ((by admin and students)
7. Showing a list of books that satisfy certain criteria (e.g., ISBN, publication year, author...)
8. Sending emails to late borrowers
9. Performing operations on books: borrowing, returning, extending borrowing period
10. Log out

Web Project

University Library Management

Project 1

20180246	محمد يسري عبد العال عبد الوهاب
20180239	محمد محمود منصور السيد عدس
20180226	محمد صبح محمد صبح
20180241	محمد ناصر اسماعيل
20180029	احمد محمد عبد الواحد

Introduction Chapter

Description:

Project Name: University Library Management.

This project is about library management to add books, borrow books, and return books and browsing books in library.

The users make account and define their role (admin, student).they can log in their pages update their profile and log out any time.

Technologies used:

- i. VS Code for writing HTML, CSS, Java Script and PHP.
- ii. Xampp
- iii. PHP MY Admin

Team members Roles:

Mohamed yosry Abd-Elaal:

Signing up new user

Logging in

Home page

Ahmed Mohamed Abd-Elwahed:

Browsing books ((by admin and students)

Showing a list of books that satisfy certain criteria (e.g.,ISBN, publication year, author...)

Mohamed Mahmoud Mansour:

Updating a user details

Adding a book (by admin)

Updating a book details (by admin)

Mohamed Sobh Mohamed:

Performing operations on books: borrowing, returning, extending borrowing period

Mohamed Nasser Ismail:

Sending emails to late borrowers

Log out

Mohamed yosry and Mohamed Mahmoud Mansour: connecting the pages with css and ajax

Design/Implementation Chapter:

Script.js(containing all java script functions and ajax)

```
function signalvalidation(){

    var username = document.forms["form"]["username"];
    var email = document.forms["form"]["email"];
    var password1 = document.forms["form"]["password1"];
    var password2 = document.forms["form"]["password2"];

    var status=false;

    if(username.value==""){
        document.getElementById("namechecker").innerHTML="Enter valid name.";
        status=false;
    }
    else{
        status=true;
    }
    if(email.value==""){
        document.getElementById("emailchecker").innerHTML="Enter valid email.";
        status=false;
    }
    else{
        status=true;
    }
